TouchableOpacity

Button

A basic button component that should render nicely on any platform. Supports a minimal level of customization.

If this button doesn't look right for your app, you can build your own button using [Pressable](#). For inspiration, look at the [source code for the Button component](#).

```
tsx<Button  onPress={onPressLearnMore}  title="Learn More"  color="#841584"  accessibilityLabel="Learn more about this purple button" />
```

Press Events

`onPress` in `<Button>`, `<TouchableOpacity>`, `<Pressable>`

```
const showAlert = () => {  
  Alert.alert('Hello!', 'You pressed the button.');
```

```
  // Do whatever you want in this section . . .  
  
};  
  
return (  
  <View style={{ padding: 40 }}>  
    <Button title="Show Alert" onPress={showAlert} />  
  </View>  
);
```
